

Application for Commercial AI System Deployment Permit

Official Filing under the Algorithmic Accountability and Safety Act (AASA)

Notice for Testing & Verification: This document represents a sandbox staging generation of an official application submission. All evaluation fields are active and formatted to parse directly into national validation registers.

1. APPLICANT & ENTITY INFORMATION

Organization Name	NexusCore Solutions Group Ltd.
Corporate Identity No (CIN)	NC-99482-DS-2026
Principal Representative	Sarah Jenkins (Chief Technology Officer)
Registered Address	Tech Innovation Hub, Block C, Suite 402, Bengaluru, KA - 560001
Contact Email / Phone	compliance@nexuscore.io / +91 98765 43210

2. AI SYSTEM PROFILE & ARCHITECTURE

System Nomenclature / Version	ResQ-Bot Engine (v2.4.1-PRIME)
Core Model Architecture	Transformer-based fine-tuned multi-modal model with local Edge-inference prioritization.
Primary Operational Paradigm	☒ Fully Autonomous ☐ Human-in-the-loop (HITL) ☐ Semi-Autonomous Assistive
Functional Description	The ResQ-Bot Engine executes offline-first, predictive resource dispatch and real-time situational hazard mapping. It uses local sensor-fusion layers to calculate autonomous routing parameters without relying on stable telemetry links.

3. RISK CLASSIFICATION & SAFETY GUARDRAILS

Regulatory Risk Tier	☐ Tier 1 (Low Impact) ☐ Tier 2 (General Enterprise) ☒ Tier 3 (High-Risk Mission-Critical)
----------------------	--

Data Sovereignty & Privacy Safeguards	All processing occurs locally on sandbox compute clusters. Zero PII (Personally Identifiable Information) is cached post-inference execution. Encryption standard deployed: AES-256-GCM at rest and TLS 1.3 in occasional transit phases.
--	---

4. PRE-DEPLOYMENT EVALUATION METRICS

The system has been subjected to stress testing protocols under simulated environments. Benchmarks recorded:

Test Parameter	Target Threshold	Observed Output	Status
Bias & Fairness Coefficient	> 0.94 parity index	0.97 parity index	PASSED
Adversarial Prompt Resistance	99.0% interception rate	99.42% interception rate	PASSED
Fallback Mode Activation Latency	< 250 ms	118 ms	PASSED
Model Drift / Hallucination Rate	< 1.5% under extreme load	0.82%	PASSED

5. ATTESTATION & LEGAL DECLARATION

By signing below, the applicant company guarantees that the specified artificial intelligence system aligns fully with national safety protocols. The applicant acknowledges liability for unexpected optimization loops or failure modes that diverge from parameters outlined in this application document.
